PLACENTA

Keep Your Youthful Glow with Natural Fresh Human Placenta Extract

Fresh Human Placenta Extract is derived from human placenta and contains various enzymes and essential substances that are vital for the body. It is effective and suitable for addressing different issues such as dark skin, blemishes, acne, keloid scars, and wrinkles. This is because the extract contains FGF (fibroblast growth factor) and EGF (epithelium growth factor), which stimulate the production of collagen, elastin, and hyaluronic acid in the dermis. This, in turn, helps in restoring and repairing the skin, promoting overall skin health. The stimulation of fibroblasts in the skin by human placenta extracts results in brighter, softer, smoother, and more flexible skin reminiscent of baby skin.

Furthermore, the extract inhibits the enzyme tyrosinase, a key player in converting tyrosine to DOPA (3,4-dihydroxyphenylalanine). Since DOPA is involved in the process leading to melanin pigment, the inhibition of tyrosinase by human placenta extracts contributes to a lighter and brighter skin tone. It aids in restoring and repairing skin affected by dark spots caused by inflammation, resulting in a complexion that is whiter and brighter.

Utilizing placenta stem cells for maintaining skin health and beauty provides more than 8,000 types of peptides and over 1,400 types of enzymes. These components are compatible with our bodies, allowing for easy absorption. Consequently, the body's cells work with maximum efficiency, contributing to overall health and beauty.

Replay Placenta for WOMEN

- Anti-aging; reduces appearance of fine lines, wrinkles and pigmentation
- Promotes weight loss and a healthy metabolism
- Improves skin density by igniting collagen production and cell renewal

- VEGFD
- Testosterone 0
- VEGF-A
- FSH

NAD+

ENERGY

POST COVID

IMMUNE

ANTI-AGING

BRAIN

WHAT is NAD+

Nicotinamide adenine dinucleotide (NAD+) is one of the most important coenzyme your body and is present in all your cells. It is known to be involved in over 500 different reactions that keep cells in good health. Think of NAD+ as the electricity that charges the batteries of your cells (called mitochondria). All cells have a large amounts of mitochondria and each requires NAD+ for energy to function at optimal levels.

Increasing NAD+ levels supercharges the batteries of your cells which get depleted as you age. By the time you reach the age of 40, over 50% of your NAD+ levels have been depleted. This decline leads to aging, health conditions and other serious diseases.

Recharging your cells with NAD+ could significantly improve your health and benefit the processes associated with health, longevity and aging.

Benefit of NAD+

- Anti-aging benefits to slow and reverse aging
- Enhance memory and brain function
- Recovery from Post-Covid infection
- Boost immune system and organ functions
- Boosts energy; Fights chronic fatigue
- Helps to achieve & maintain a healthy weight
- Promotes growth & maintenance of muscle
- Enhance athletic performance
- Improves overall skin appearance
- Helps combat depression & anxiety
- Reduces pain caused by inflammation

Advance ANTI-AGING Treatment

IT IS NATURAL

A derivative of Vitamin B, NAD+ is found in every cell in the body.

IT IS FUEL

NAD+ is a crucial substance in the production of ATP for energy in your body. Keeps your cells in optimal health.

IT IS RESTORATIVE

NAD+ helps your cells heal and helps with cellular regeneration. Essential for anti-aging.

IT IS BALANCING

It helps balance the body by repairing the mitochondria - the powerhouse of your cells.

IT IS PROTECTIVE

NAD+ has shown to be both neuro-protective and neuro-regenerating for improved brain health.
